

SMARTKEEPER

BY Autel

SmartKeeper is an innovative system for managing keys and small objects

SmartKeeper is an innovative system for managing keys and small objects designed for medium and large businesses. The system effectively prevents unauthorized use of your keys.

SmartKeeper ensures the controlled distribution of keys and small items to authorized persons only.

A valid user card unlocks the glass door. After closing the door again, the system evaluates the current status, and record data about all changes.

The system maintains history about all lending and returning of keys and shows who has a particular key just now. SmartKeeper helps track the movement of each key, a bunch of keys or objects.

Functionality

- Autonomous Solutions
- Easy web interface
- Informative LCD display
- Access via RFID employee card
- Easy management and configuration via a web interface
- 230V power supply with battery backup
- Connectivity with third party information systems by SOAP interface

All keys and key bunches are hung by inserting the key fob into the slot.

Small objects fitted with RFID code are simply stored on the shelves.

10" display informs the user about the current status.

Easy management and configuration via a web interface.

Parameters
